

## XPe Management Download Instructions

For Aurora Build 82

### → Download the Aurora Build 82

FTP Server: mx2.devonit.com  
Username: Images  
Password: nt@t3rmina15  
Directory: ./Aurora  
Filename: XPEbuild82.zip  
File Size: 114,638,333 bytes

### → Uninstall Older Versions

If you have an earlier version of Aurora currently installed, perform the following 2 steps prior to installing build82:

- Delete the contents of the ftp folder specified during the last Aurora install.
- Uninstall the previous Aurora software, using "Add/Remove programs" from Windows > Control Panel.

### → Installation

Follow the installation guide named, "Aurora for Windows Embedded Installation Guide"

URL: <http://www.devonit.com/pdfs/Aurora-InstallationGuide013108.pdf>

### → License Keys

During the install, you will be prompted to enter an initial license key. This is common for all installs. The installation key will install the software and will allow you to manage up to 5 devices:

Common Installation key is: 0001-79B1DA86

For managing more than 5 devices, you will need to contact us for additional license packs. Please refer to section 2.2.2 *Installing License packs* in the *Aurora Installation Guide*, for detailed instructions on this process.

### → Administration

Once installed, refer to the manual for administration instructions.
