

Devon IT VDI Blaster™

Turn OLD PCs into NEW Thin Clients with the Devon IT VDI Blaster™

Devon IT's VDI Blaster™ software suite gives new life to your old PCs by converting them into thin client terminals.

VDI Blaster™ converts aging enterprise PCs into secure, managed desktop appliances, enables organizations of all

sizes to realize benefits of thin client computing, and extends your capital investment in PCs. For companies and organizations looking to maximize the useful life of existing personal computers, VDI Blaster™ offers the benefits of a thin client at a fraction of the price of a new desktop PC.

Specifications

- Complete session functionality – Devon IT's Linux-based operating system DeTOS™ can handle various session types, including VMware View, XenApp and Microsoft Terminal Server.
- DeTOS™ is easy to use and manage. Configuring a session out of the box is quick and simple.
- A single, unified operating system for all of your desktop hardware. No need to manage two or three different operating systems depending on the type of hardware.

▶ Creates the ability to run current Windows OS and applications	▶ Extends useful life of current hardware
▶ Connects thin clients to Microsoft Terminal Services, shared services, and virtual desktops	▶ Minimizes risk of switching to virtualized architecture; PC can be returned to its previous state
▶ A simple plug-and-play replacement to a thin client	▶ Vendor independent thin client OS & manager for any thin client & PC

How VDI Blaster™ Works

VDI Blaster™ deploys Devon's thin client OS – DeTOS™ – to old PCs via USB key, or a network install. VDI Blaster™ converts old PCs to thin clients, supports other brands of thin client devices, and allows administrators to manage them all from a single management interface. Companies can use VDI Blaster™ to push DeTOS™ to older PCs. This helps extend the life of PCs while enabling the transition from client server to hosted desktop. Devon's management software, ThinManage™ provides centralized control of enterprise-wide thin client deployments. By simplifying IT management of terminals and repurposed PCs, ThinManage™ further increases return on investment from server-based computing.

Manage Every PC

With PCs running as thin client appliances, they can be managed centrally and updates can be deployed automatically so devices always have the latest software.

The newly configured thin client systems' hardware and connection settings (resolution, logging, etc.) are managed from the Devon's ThinManage™ (supplied with VDI Blaster™), making the newly repurposed PCs easy to manage. Using VDI Blaster™, DeTOS™ can be distributed to PCs across your entire network as needed.

Central management of PC desktops reduces costs, improves asset management, speeds application deployment, and strengthens security. Installing DeTOS™ on aging PCs is more cost-effective than replacing existing hardware, and in almost every case DeTOS's minimal desktop hardware requirements are met by your existing PCs.
